

## INSTALLING THE ISLAMIC LANTERN

Your pack contains:

- 4 Plastic panels with stained glass pieces attached.
- Cube plastic base (with an access window on the bottom and lamp holder on the top)
- 2 Metal squares (One top, one bottom)
- 4 metal corner profiles (180 cm long)
- 2 Wood frames (Number 2 and 4)
- 4 wood crossbars
- Top plastic square with lamp holder and the middle bar with lamp holder attached. Cable and plug
- 4 screws, allen key and elastic band

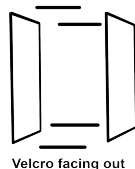

### THE PANELS

### INSTALLING THE LANTERN STEP BY STEP

1. Chose the place where it is going to live and place the metal base on the floor facing up.
2. Place inside the black box, lamp holder facing up (take care not to step the cable)
3. Build up the wooden skeleton:

THE CARCASS  
WOOD

- Insert the wood crossbars matching numbers and letters between the two wood frames. Velcro it is facing out and the four screws are on the bottom.

- Once you have the cube, place it on the top of the black box matching numbers.

- Tight up the screws (you can use a penny coin provided on the kit tool box)

4. Now you can bring the first panel. Start with number 2. Leave it rest on the edge of the base sheet and secure it to the pole using the Velcro.

5. Place number 3

6. Place number 4

7. Wait! Do not place number 1 yet. Before that, you have to set the upper and middle lighting.

Take the plastic tap square. Pass the cables and middle bar inside the cube and place the plastic with the cable coming along the bar number 1 (at your right hand side).

Place in position the middle bar with the lamp holder facing up. It goes in a diagonal (resting on blocks on bar number 1 and number 3)

Bring the cable down, secure it against the Velcro. in bar 1 and insert the plug on the hole.

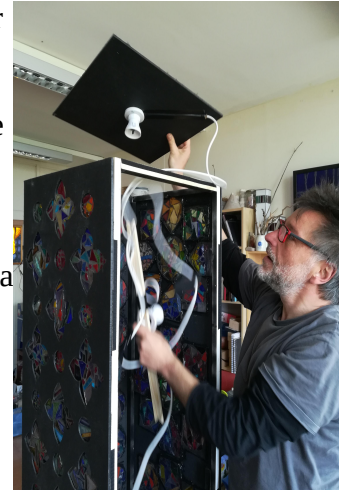

8. Put the light bulbs

9. Before closing the box, check that the lights are working properly.

10. Now you can place panel Number 1

11. About 10 cm from the top of the box, fasten the elastic band in order to secure the whole structure while you are finishing the installation.

12. Take corner bar number 1, insert it on corner 1 (between the box and the metal profile), and hold it on the top with the elastic band.

13. Repeat the process with corner 2, 3 and 4

14. Place the top metal square (check that it goes in the right position, the back side on the side of the access window) and press till all the metal profiles are in.

15. Screw it to secure it at the top and bottom. (use screws and allen key provided on the tool kit).

16. Remove the elastic band

17. Set inside the box the cables, extensions and close the door/lid.

18. Fix the cable to the floor as more convenient for your space.

CONGRATULATIONS!!! You have mounted your first giant lantern!
